

MOTOWN SOLUTIONS

What your AI-built prototype skipped

SWIPE

Data that survives a redeploy

A real schema, migrations and backups, so the data stays consistent and is still there after the next deploy.

Real sign-in and permissions

Proper authentication, role-based access and secrets kept out of the code, in place of anyone being able to sign in.

The paths a demo never takes

Background jobs, queues and error handling, tested under real load so the second user doesn't break it.

The services it depends on

Payments, sign-in providers, email and monitoring, each connected properly and hardened.

A way to ship and roll back

Automated deploys with monitoring, so a release is routine and a bad one can be undone.
